THE INTRODUCTION OF DECIMAL CURRENCY TO AUSTRALIA
A Decimal Reformation

THE INTRODUCTION OF DECIMAL CURRENCY TO AUSTRALIA
With the introduction of the New Note Series, issued between 1992 and 1996, Australia became the first nation to convert successfully its paper-based currency to polymer banknotes. The innovation had been based on home-grown technology and skills that were exported to many other countries – a contrast to the nation’s first series in the early 20th century, when technology and expertise were imported.

Pocket Guide 3 describes the introduction of decimal currency to Australia in 1966. By this time, the Reserve Bank of Australia had evolved from the Commonwealth Bank to become the nation’s central bank. The Reserve Bank began operations on 14 January 1960 with the objectives of maintaining the stability of the country’s currency, full employment and the economic prosperity and welfare of its people. Dr HC (Nugget) Coombs, Governor of the Commonwealth Bank since 1949, was appointed the Reserve Bank’s first Governor.

A new series of banknotes and coins was designed for the release of decimal currency, with imagery that enhanced a sense of the country’s distinctive identity. The coins were designed by Stuart Devlin and minted by the Royal Australian Mint, Canberra, which opened in 1965. The Reserve Bank oversaw the production of the new banknotes for the $1, $2, $5, $10 and $20 denominations, issued between 1966 and 1967. As inflation increased, two higher denominations were introduced: the $50 and $100 banknotes issued in 1973 and 1984 respectively.
A DECIMAL REFORMATION

In the late 1950s, the Australian Government began to give practical consideration to the introduction of decimal currency. The new currency would replace the denominations of pounds, shillings and pence and simplify calculations, thereby increasing financial efficiency. The government, led by the Liberal-Country Party coalition of Prime Minister, Robert Menzies, announced in 1963 that it would introduce decimal currency in 1966. The Decimal Currency Board was established to oversee the conversion, and the Reserve Bank had responsibility for production of the decimal currency banknotes.

The name of the new currency unit became the subject of a public competition that elicited nearly 1,000 suggestions. They ranged from the sober recommendations of the Austral, Dollar, Crown, Pound, Regal, Royal and Tasman, to more outlandish ideas based on fauna (Goanna and Magpie), Australian pastimes (Phar Lap and Schooner) and national identities whose names might lend drama to the currency, such as bushranger Ned Kelly. Prime Minister Menzies announced in June 1963 that the new banknotes would be known as the Royal, so maintaining a link with the United Kingdom and shared aspects of British culture. The choice of the term proved to be unpopular with the public and, in September 1963, the decision was reached to call the new unit the Dollar.
The Reserve Bank began operations on 14 January 1960 as the nation’s central bank. The new Head Office in Sydney’s Martin Place was completed in 1965. Dr HC (Nugget) Coombs, Governor of the Commonwealth Bank since 1949, was appointed the Reserve Bank’s first Governor.

Reserve Bank of Australia Archives, NP-002811.
Four Australian designers were selected to prepare preliminary designs for the decimal currency banknotes: Gordon Andrews, Richard Beck, Max Forbes and George Hamori. They were advised by the prominent artist, Russell Drysdale. The designers were required to include Queen Elizabeth II on the $1 banknote, but they were otherwise free to choose historical figures and themes in consultation with the Bank. While Max Forbes’ designs were admired as being “quite beautiful” and “romantic”, the individuality of Gordon Andrews’ banknotes was considered better suited to the new currency and he was announced as the winning designer in April 1964.1 “We believe that the climate of visual opinion in Australia has changed profoundly during the past few years … to a nation which likes to think of itself as progressive,” wrote Alistair Morrison, Chairman of the Design Committee, in support of the choice of Andrews’ designs. He commended the designs for their “qualities of freshness, originality, elegance and technical competence”.2 Design work began with the specialist firm, Organisation Giori in Milan, Italy, and new note printing machinery was obtained from the United Kingdom. Gordon Andrews continued to receive advice from a design panel, comprising distinguished fellow designers, Alistair Morrison and Douglas Annand, and the Director of the Art Gallery of New South Wales, Hal Missingham. The artist Russell Drysdale remained as artistic adviser for the panel and consultant for the Bank.
Max Forbes, preliminary design concepts for the $1 banknote, showing Queen Elizabeth II with Australian flora, a cockatoo and a kookaburra, ink and wash with pencil on paper, 1964.

Reserve Bank of Australia Archives, NP-004202.
Max Forbes’ design for the $10 banknote relates to the theme of flight and aviation, featuring a portrait of Sir Charles Kingsford Smith with Australian birds on the back.

Max Forbes, preliminary design concepts for the $10 banknote, ink and wash with pencil on paper, 1964. Reserve Bank of Australia Archives, NP-004201.
“WE COMMEND, IN PARTICULAR, THE DESIGNS SUBMITTED BY MAX FORBES... THEY ARE, WITHOUT DOUBT, EXCELLENT AND QUITE BEAUTIFUL. THEY ARE ROMANTIC IN CONCEPTION AND TREATMENT ... THE DESIGNS, EXCELLENT THOUGH THEY ARE, ARE NOT OF THE PRESENT DAY.”

Alistair Morrison, Chairman of the Design Committee, to AC McPherson, Secretary of the Reserve Bank of Australia, 6 April 1964.
A COLOUR REVOLUTION

The colours of the new banknotes were determined by those of equal value in the previous series of the 1950s. The association of value through the banknote’s colour assisted the public in adjusting to the new decimal system. For example, the brown tone of the 10 shillings banknote was transferred to the new $1 banknote, and the green of the £1 banknote was assigned to the $2 banknote as they represented equal monetary values.

Chart of six alternative colour intensities for the background of the $1 banknote. Reserve Bank of Australia Archives, NP-002013.
While complying with this requirement, Gordon Andrews varied and enlivened the colour palettes, introducing contrasting tones that imparted more vibrancy than the relatively subdued tones of the previous series. Andrews formulated his inks and tested each colour and density by applying a sample on card with a palette knife and labelling the tone.

For the $1 banknote Gordon Andrews developed a more prominent expression of Aboriginal culture than had been shown previously on Australia’s currency, relating the required colour for the banknote to tones associated with Aboriginal bark painting. The designer reimagined the Australian coat of arms in a way that seemed compatible with the idea of Aboriginal design, improvising its style.

Rock paintings and carvings adapted from secondary sources appeared on the banknote, together with a reproduction of the contemporary painting *Funerary rites of Gurmirringu* by David Malangi Daymirringu (Manharrnu). Surrounded by kinsmen with clapsticks, the ancestral hunter Gurmirringu receives funeral rites, following his fatal bite from the snake shown by the white berry tree. A photograph of David Malangi’s bark painting was supplied to Russell Drysdale by the collector Karel Kupka, who had acquired the work on behalf of a French cultural institution.³
The new designs for the decimal currency series reduced the banknotes’ previous emphasis on economic prosperity but continued to acknowledge the country’s pastoral and agricultural industries, which were selected for the green tones of the $2 banknote. As Gordon Andrews remarked, “It would have been suicide to have left the sheep out.” In contrast with earlier versions of these activities, Andrews placed attention on the innovations of individuals, a theme throughout the decimal series. The wool and wheat industries are represented by John Macarthur and William Farrer.

Stalks of wheat are arranged across the $2 banknote with a portrait of William Farrer, who developed species more resistant to drought and disease. Whereas flocks of sheep had been depicted on previous banknotes, a single specimen becomes emblematic of the wool industry in the new series. The ram is framed by undulating lines that suggest both ribbons awarded in agricultural competitions and the swags of Regency textiles, so complementing the age of John Macarthur, who contributed to the colonial wool industry with his wife, Elizabeth.

Compared with the intricate designs of other banknotes in the series, the $2 banknote appears more conventional in both its choice of subject and treatment. The designer’s inventiveness, however, is reflected in its detail; for example, his stylisation of the sheep’s fleece creates dynamic
patterns that distinguish his rendition from previous versions. The design also shares similarities with the 1963 Woolmark logo for Pure New Wool, an emblem that was associated, like the banknote, with enduring value.

Gordon Andrews, stylised sketch of fleece for the design of the $2 banknote, black felt-tipped pen on tracing paper.

Gordon Andrews, colour samples for the $2 banknote: rainbow green, deep green, rainbow yellow, light green, ink on card.

The new banknotes’ gallery of portraits exhibited more varied subjects and more sophisticated renderings than previous series. Andrews brought vitality to the series' portraits through decisive line treatment and contrast between the use of black and the luminous facial tones and white collars, cravats and ribbons worn by various identities. He portrayed the majority of the figures from a three-quarters view that balanced the formality of the profile with insight into the personal characteristics of the face.

The new series presented a broader range of enterprises than previous banknotes, which had focussed on economic development and select colonial identities. The new banknotes reflected an emerging sense of Australia’s diversity and increased awareness of the history of women, the country’s environment, its arts and international contributions in fields such as aeronautics.
The plants featured on the $5 note are:

A  Casuarina littoralis, fruit (Black She-oak)
BQ Eucalyptus pyriformis, fruit (Pear-fruited Mallee)
CT Eucalyptus pyriformis, bud
DU Callistemon citrinus, fruit (Red Bottlebrush)
E  Weathered wood grain
F  Eucalyptus comitae-vallis
G  Eucalyptus fraxinoides, fruit (White Ash)
H  Phoebe squamulosa (magnified scales)
I  Telopea speciosissima, seed pod (Waratah)
J  Stenocarpus sinuatus, blossom (Wheel Tree)
K  Eucalyptus stellulata, fruit (Black Sally)
L  Stenocarpus salignus, blossom (Beefwood)
M  Xylomelum pyriforme, blossom (Woody Pear)
NPV  Cladium procerum (Sedge)
O  Leaf skeleton
RS  Eucalyptus huehneaniana, fruit (Yellow-top Mallee-ash)
S  Banksia integrifolia, fruit (Coast Banksia)
W  Callicris rhomboidea, cones (Port Jackson, Cypress Pine)

Key to plants shown on the $5 banknote, 1967.
Reserve Bank of Australia Archives, P13/1044.
The excursions into Australian flora made by the 1950s banknotes appear restrained in comparison with the assemblage of species featured on the $5 banknote with the botanist, Joseph Banks. Unlike the decorative examples of the earlier series, Andrews’ treatment suggests appreciation of both the individual species, including Banks’ namesake of the banksia family, and their place within the environment. In fact, the $5 banknote’s selection of flora became an actual garden within the Bank’s new note printing facility, established at Craigieburn, Victoria, in 1981.
Caroline Chisholm’s portrait on the $5 banknote represented the first occasion that an identified woman other than the monarch appeared on Australian currency. The background of the women and children, sailing ships and Sydney’s foreshore narrates her involvement in assisting young migrant women with employment and facilitating emigration by establishing the Family Colonization Loan Society.5

The arts are acknowledged for the first time on an issued Australian currency with the $10 banknote. A montage of architectural details by the convict architect, Francis Greenway, accentuates their harmonious Georgian traits. On the reverse side, the profile of writer Henry Lawson is joined by a palimpsest of his manuscripts and scenes of his childhood years, mainly from the gold town of Gulgong, New South Wales. In contrast with the decorum of Georgian architecture, the patchwork of vernacular buildings evokes the settings of Lawson’s outback stories and his use of the Australian idiom.

The choice of subject for the $20 banknote reflected not only the past but also the current and future significance of aviation. Lawrence Hargrave’s experiments in flight had been validated by Charles Kingsford Smith’s epic journeys demonstrating aviation’s potential.

On the banknote, Lawrence’s kites and flying devices are partnered with confident representations of flight in harmonographic studies that evoke futuristic qualities.

Although Gordon Andrews sought to avoid the traps of fashion that could limit the banknotes’ enduring appeal, he brought his contemporary sense of design to the currency’s requirements. His stylised depictions of historical identities and their attributes chimed with 1960s popular culture, especially its posters and covers of albums that portrayed individual musicians and bands against kaleidoscopic collages and psychedelic effects. The apparent

The apparent spontaneity of his draughtsmanship also disguised a means of protecting the banknotes against replication. Its alternating widths meant that if the counterfeiter’s camera was exposed for the thick lines, the fine lines disappeared; if exposed for the thin ones, the thick lines flared and closed over the thin.

Preliminary design of background lines for $20 banknote.

The banknotes for the decimal currency series, 1966–1967, were printed in Melbourne at the Bank’s note printing branch at Victoria Parade, Fitzroy, where the printing operations had been established in 1924. They remained at this address until transferred to Craigieburn, outside Melbourne, in 1981.

The security features of the first decimal currency banknotes included a watermark of Captain James Cook’s profile, and an internal metallic thread through the banknotes. The banknotes’ intaglio printing resulted in a raised ink film that gave an embossed feeling, especially evident on the front side of the banknotes. The British firm, Portals, developed versions of the watermark for the series, including images of the Australian coat of arms and portraits of James Cook. The portraits were based on the Royal Society’s commemorative medal of James Cook, 1784, which was also the basis of the watermark for the previous two series of banknotes.
Proposed watermarks by Portals for the decimal currency series; version 3 of James Cook’s portrait was selected.

A PUBLIC REASSURANCE

The introduction of decimal currency meant a fundamental change to the nation’s daily transactions. A prominent educational campaign familiarised the public with the new currency before it was introduced on Monday, 14 February 1966, known as ‘C-Day’ (Conversion Day). In order to increase the public’s awareness of the new values of decimal currency, a number of educational strategies were employed, including television advertisements, posters and brochures. Comics, crossword puzzles and play money were created for children.

Central to the publicity campaign was the animated character of Dollar Bill, created by Monty Wedd and drawn by animator Laurie Sharpe. Dollar Bill was voiced by the actor Kevin Golsby, who drew inspiration for his voice from the character’s stout stature and authoritative demeanour. In the television commercial, Dollar Bill explains the new system of decimal currency to Percy Pound, voiced by fellow-actor Ross Higgins. The commercial concludes in their duet of an infectious jingle, set to the tune of the Australian folk song Click Go the Shears with new lyrics by Ted Roberts. Its rhyming refrain ensured that the date of conversion remained memorable:

In come the dollars and in come the cents
To replace the pounds and the shillings and the pence
Be prepared folks when the coins begin to mix
On the 14th of February 1966
40,000 copies of each poster were distributed to Australian schools.

‘Australia’s Decimal Currency’ and ‘Our New Money’ posters, produced to explain decimal currency to children, 1965.
Reserve Bank of Australia Archives, 15/4618, 15/4617.
When the designs of the decimal currency banknotes were released in 1966, architect and author Robin Boyd considered that it was “most unusual to find a Government department in any country of the world going forward with such advanced designs”.7 Although the art critic Donald Brook found elements of Andrews’ design to be overworked, he commended certain portraits, noting that the “greatest success is almost certainly Francis Greenway on the front of the ten, against a background of flattened and patterned architectural fragments. Henry Lawson on the other side looks startlingly three dimensional in his dramatic chiaroscuro ...”8
While the new decimal banknotes were received well, the public’s trust was tested when counterfeit $10 banknotes began to circulate at the end of 1966. The incident became known as the ‘Times Bakery’ forgery as the building’s reproduction was misaligned on the counterfeit banknotes. The forgers were soon apprehended and the Bank began the process of developing more sophisticated technology to prevent future counterfeiting.

Counterfeit $10 banknote, showing the unequal horizontal lines on the right-hand side of the Times Bakery building. In authentic banknotes, these lines are flush with each other.

A DECIMAL RESTORATION

As inflation increased in the 1970s and 1980s, new coins and higher-denomination banknotes were introduced. The condition of the $1 and $2 banknotes deteriorated quickly owing to their rapid circulation to make transactions, and so their replacement by coins – a $1 coin in 1984 and a $2 coin in 1988 – reduced the costs of maintaining the currency. The printing of the $50 banknote in 1973 and $100 banknote in 1984 were the first occasions that higher-denomination banknotes had been issued since the First Series (1913–1914).

Designed by Gordon Andrews, the $50 banknote’s theme of scientific innovation reflected Australia’s increased public investment in research. The design focussed on Howard Florey, the Adelaide-born pathologist who progressed penicillin as an antibiotic drug, and Ian Clunies Ross, a leading figure of the Commonwealth Scientific and Industrial Research Organisation (CSIRO). The intricate backgrounds of the banknotes include scientific miscellanies of *Penicillin notatum*, white blood cells and colonies of bacteria accompanying Howard Florey, while the portrait of Ian Clunies Ross is supplemented by images of a microscope and telescope, chromosomes and snow crystals, cellular structure in plants and transistors in computer circuitry.

The $100 banknote was designed by Andrews’ colleague, Harry Williamson, who extended the scientific theme and introduced his own style of distilled clarity. Underpinned by the idea of discovery, the banknote portrayed the astronomer John Tebbutt and Douglas Mawson, whose scientific contributions included three Antarctic expeditions. The design portrays Mawson in Antarctica against a background of geological strata formations that he studied in the Flinders Ranges of South Australia. John Tebbutt is pictured beside his observatories at

Reproduction of snow crystal structure adapted for the $50 banknote, 1973.

Windsor, New South Wales, where he helped to lay the foundations for Australia’s involvement in astronomy with the discovery of major comets.

The $100 banknote was the first new banknote printed at the Reserve Bank’s printing works at Craigieburn, Victoria. Opened in 1981, the facility anticipated the industry’s growth and evolving technical requirements. As mentioned previously, the counterfeit of the $10 banknote in 1966 had prompted the Reserve Bank to investigate technology that might prevent future counterfeiting. The Bank began a process of scientific collaboration with the CSIRO and some two decades later, its progress was evident in an Australian invention – polymer banknotes, the subject of the next guide in this series.
